QUESTIONS

1. The course syllabus clearly stated the expected goals/objectives/ competencies for the course.
2. The course syllabus clearly outlined the grading criteria for the course.
3. The course addressed the competencies as outlined in the syllabus.
4. The course was well organized.
5. Key lecture concepts were frequently summarized for emphasis
6. Adequate class time was provided for questions and related discussion.
7. The course encouraged me to think critically about the content material.
8. The course included explanations or examples that illustrated the clinical relevance of the material presented.
9. Case study assignments were used effectively to deliver course content.
10. In-class presentations and demonstrations were used effectively to deliver course content.
11. The required textbook for this course was an effective learning resource.
12. Supplemental materials (e.g. books, journal articles, videos, online materials) improved my understanding of the subject matter.
13. There were opportunities for formative assessment (e.g., quizzes, discussion questions, practice questions, review questions).
14. Exams accurately reflected course content.

COMMENTS

Evaluation – Histology II – Course Comments

1. I think that the written should have some more clinical questions.
2. The course is very well put together and thought out. I appreciate how each lecture is presented and makes the material understandable.
3. The sequence of lectures didn't seem to follow a rational path. It would also be nice to have classes more consistently instead of the random schedule we had
4. great professor
5. a) Well organized, and easy for students to learn and understand the main points. b) c) this is a great class and I learn a lot from it.
6. Dr. Millette is a good professor, but I have more trouble with his exams than I do other courses. In the past some of his test questions have seemed left field
7. a) It is very straight forward. There is no cryptic hidden concepts that we are expected to decipher from the material and be tested on. If it is taught, it is tested on. If it is not taught, it is not on the test.
8. There needs to be pictures of all kinds on the PowerPoint for students to study off from. I can't seem to find pictures similar to those presented on the image exam. When I haven't seen something similar to the picture seen in the exam, it's hard to answer.
9. a) a good summary course b) none c) more clinical content getting us ready for pathology
10. The histology course has prepared me for most of my other courses. It is rigorous and all-encompassing. I think it is well designed
11. Well taught, well defined, and well tested.
12. Dr. Millette does really well with giving us just the information we need to know for path or boards. He gives great examples to help us grasp the concepts.
13. The revisions to the course from last semester have really improved my ability to pass the tests. I have increased my grade from the absolute lowest passing grade to a strong B. The class is very organized and the material lectured is the material tested.
14. One of my favorite courses. Learn so much and this course really integrates well with other courses
15. Content was clearly presented and helped me learn material for another integrated class much better just because I understood the material in this class.
16. Histology is without a doubt, my favorite course. There is NO room for improvement because it is already well organized and well delivered. Well done, Dr. Millette!
17. Unavailable to provide feedback on course, as course is only halfway complete. It would be best to complete a course evaluation post course completion to better evaluate the course
18. Good course
19. Good course, well done
20. The book is a great resource for histology as well as physiology. It is easy to read and a perfect resource for medical students in an integrated curriculum.
21. The amount of time this course consumes for one to make an A in the course is not congruent with the class credits. More time spent on the microanatomy should be spent rather than physiology. The purpose of integration is so that one can spend more time on their respective section. I am aware that histology has always been mildly coupled with physiology but since we

Evaluation – Histology II – Course Comments

are now integrated I think we should spend less time on the physiology in this course and more time learning how to recognize specific tissues.

22. good teacher
23. good course
24. it is structured very well
25. a) succinct, straightforward, clearly organized b) none c) none
26. Dr. Millette rules
27. Histology is by far one of our most effective classes. The information is easy to obtain through lectures and reading the book and everything is effectively communicated. The class is also great on helping tie the rest of the classes in because it definitely makes a great introduction on understanding physiology topics and tying in biochemistry.
28. a) This semester having lecture hours that were review sessions were very helpful sessions
29. a) The material was presented very clearly. b) The slides on the tests are blurry. Rarely would a microscopic slide include blurry images since you would adjust everything so it wasn't blurry.
30. This class was very consistent and informative
31. Course is organized well. Sufficient time is provided for the material presented. No need for improvements
32. Great class, it integrated very well with the other courses
33. Histology gave me an all-around approach to the subject matter, not just covering Histology but emphasizing important concepts in Physiology and Biochemistry. I like the overlap of material because by the 3rd time in one day of hearing something it does sink in.
34. I think this course is set up well; we are given the necessary amount of information in an efficient amount of time. Dr. Millette seems to know what level of histology medical students need to know and sticks to that. I appreciate that he only provides the information appropriate for this point in our medical career.
35. You have done much better this semester then last about finishing lecture on time, keep it up! Everything else is good Thank you for not taking attendance.
36. I thought the textbook was a really good one and it actually supplemented my learning for physiology by summarizing key concepts. Organ ID list helped out so much. Practice practical exams helped out so much. I actually thought the overall structure this semester was good and Dr. Millette was able to finish each corresponding system pretty early before the integrated exams.
37. Course overall is very organized and it's easy to follow. Dr. Millette is very organized and uploads all this PowerPoint slides prior to the beginning of each new block. This is extremely helpful for students that are taking histology for the first time because it gets us oriented with the new vocab terms, and then we are able to read the book and assimilate the information before lecture. This is one of my favorite classes and Dr. Millette is one of my favorite professors. He clearly teaches us exactly what will be on the test. Everything is organized and consistent. Overall, a great professor and a great asset to William Carey.
38. This course is very well organized. The content is broken down into easy to define categories and is easy to follow. My biggest complement for this class is the testing. Unlike some of the other integrated courses I felt that the Histology examinations were extremely fair and that the

Evaluation – Histology II – Course Comments

questions were written to truly test our knowledge. Many questions were easy to answer as long as you had studied and there were more difficult questions that were thrown in to separate out those who truly have a mastery of histology vs those who have only a working knowledge. My one weakness to point out also involves my one suggestion. I love that we get practice histology image questions but I wish there was a way to have more practice for the written exam. Either in the form of periodic online quizzes (graded/not graded doesn't matter) or in the form of more in class clicker questions.

39. Well done.
40. The mr sid viewers are cumbersome but the slides are great. The course flows so well with physiology. They need to be kept together.
41. Excellent
42. Due to the fact that Dr. Millette does such a fantastic job teaching students how to read images, I would like to see him have the opportunity to teach more of the neuro/histo component that we get in neuroanatomy. Additionally, I would like to see glimpses of introductory histopath be incorporated in first year (not to be tested on the lab practical, but perhaps some images on the exam to correlate with pertinent diseases).
43. a. It is an extremely effective course b. I wish we could have access to the Wheaters textbook. c. See bullet "b"
44. Surprisingly, I really enjoyed this course. It's laid out well, flows well with the other courses, and helps explain the other courses. As a matter of fact, I learned MUCH MORE about physiology from the histo book and Dr. Millette than I ever did from any of the physiology resources including the books. I think everyone at WCU-COM could learn a thing or two from histo.
45. I like the change of how the tests go from last semester. I enjoy that we are asked more identification questions which gives us a better chance to reflect our knowledge. I enjoy this course
46. Great course
47. The increased number of image questions was supposed to help the students' grades. It seems that it has either been detrimental or not changed students' grades. I think the reason behind this is that more tricky questions were added and that's obviously not going to help. Otherwise great class and I learned an incredible amount that I will know for many years.
48. a. great course, learned a lot b. making it 75% images/ 25% lecture c. make it evenly split between lab and lecture
49. Students always know what to expect with the exams in this course
50. Dr. Millette is a great instructor
51. Well-organized.
52. The course was well balanced for the credit hours earned. The more complex information was described in detail and was emphasized in lecture. The course was perfectly done.
53. This is the most organized course of the COM. Dr. Millette tells you what you need to know and it is what is actually tested.
54. Histology was a very straight forward course and it was presented in a wonderful manner. It is perfect the way it is.

Evaluation – Histology II – Course Comments

55. No complaints at all. Very in depth and straightforward delivery of the field of histology. In addition, Dr. Millette is does a great job in integrating the other courses.
56. Very well-taught class
57. Please keep doing the practice exams that was very helpful. The Mr. SID is not a helpful resource when you are unsure of what you are looking at. I know the point is to learn, but it gives you no anchoring point. You are organized, and that makes you the best professor here, in many ways.
58. Strengths: Dr. Millet is concise and straight to the point on the topic of the day. I know exactly what he expects from me as far as learning for the test and career. The power points included with the Mr. Sid images are excellent. Weaknesses: The image exam is not on examsoft. Also Dr. Millet usually spends the first 10 minutes of class ranting about something; it's just a waste of time. Suggestions: Don't rant, image exam on the computer, keep everything else the same.
59. Once again, reading the textbook definitely helped. I normally don't ever read a textbook (which is a bad thing in the first place...but I'm being honest here) but when I read the textbook in this class, it helped me think along with Physiology about what's going on at a detailed level which is a really good thing...trust me. You want to know the details!
60. There are no areas in which need improvement. Maybe a longer class time...but this applies to all classes
61. I do like that the material from the first semester builds on the second semester. The course follows physiology closely which makes studying for both course easier
62. a. great course, great teacher
63. Course is concise and delivers the material that is important to our education. not too difficult as long as the effort is put in. Keep Dr. Millette teaching this for a long time!
64. A) The exams are very well written and reflect the course material. The practice image exams are extremely helpful for me to gage my knowledge and to try to get a feel for how questions will be asked on the actual exam. The course is laid out well and really integrates with the other courses. It really makes the material salient and easy to understand. B) The cumulative portion of the image exams can be difficult at times because the first reaction is to always try to figure out an answer based on our current materials. It makes me second guess myself, because the first instinct is that the image is one of the more obscure concepts in the current material block. C) Maybe mark the questions on the image exam that are cumulative review, so we know that the image indeed is not from the current block of material.
65. I LOVE this class! Dr. Millette gets straight to the point (unlike a lot of other professors who get side-tracked). Also, this class is wonderful because it doesn't bother us students with extra work outside of class. Dr. Millette is able to teach us the subject matter without the use of weekly quizzes and writing assignments. I wish other classes were as straight-forward as histology.
66. I wish the exam questions were evenly distributed between image and written questions
67. a) I think the class is great in terms of reinforcing our knowledge from other courses. Physiology and histo did a great job this semester integrating the material. c) I think histo should be taught in one semester instead of two. I think it would be beneficial to students to have more time dedicated to pathology the second semester.
68. a. The course is great. I think Dr. Millette does a FANTASTIC job teaching us histology. b. I do wish we could tie (integrate) histology a bit more with anatomy and pathology if possible. c.

Evaluation – Histology II – Course Comments

Truthfully, this is one of the best run courses we are taught. However, the professor can be a bit long winded and run over the allotted time.

69. Well organized course.

70. This course is very well run. I think that the course director knows how to teach and knows how to test students on material that he, in fact, taught. I have nothing but good things to say about this course.

71. The course is very straightforward and there are no surprises on the tests

QUESTIONS

1. Begins and ends class sessions on time.
2. Overall, effective as an instructor.
3. Effectively communicates subject matter through use of well-organized lectures.
4. Effectively engages students in case-based discussions.
5. Effectively emphasizes key learning points.
6. Paces instruction according to the complexity of the material.
7. Effectively organizes delivery of the material in a manner that is focused and succinct.
8. Effectively uses in-class demonstrations and/or clinical examples.
9. Is responsive to student questions and interactions during class.
10. Encourages critical thinking and analysis during class sessions.
11. Demonstrates courtesy and respect for students.
12. Is accessible for help outside of class during office hours or by appointment.
13. Seems to care about students' learning.
14. Demonstrates enthusiasm for the subject.

Evaluation – Histology II – Millette Comments

1. I would prefer you have practice exams. Also some people's computers cannot run the Mr. Sid or the Mac equivalent with new software updates.
2. Dr. Millette is a great professor. He understands how to communicate with students and present material in a way that is important clinically and ties in the important facts to other classes. The way the lab exam is handled needs to change. It needs to become part of the computerized examination given in the same time frame. Having the exam at 1pm after a full morning of testing is ridiculous and does not fall in line with the standards of all of our other exams. Otherwise, I think the class overall is great.
3. The course is very well designed and i feel like i learned lots !
4. The COM should adopt Dr. Millette's attendance policy
5. Dr. Millette is the best professor here. I wish he could teach every subject. I think we would all do well on our board exams. When he explains something, it is so easy to understand. He is straight forward and fair. No games, no gimmicks. Just knowledge given and fairly reflected on the exam.
6. a) succinct, and emphasize on the key points of the material b) Dr. Millette goes over time but I don't mind it at all c) Dr. Millette is one of the best professors at the COM. I love his teaching style.
7. Dr. Millette is a nice and caring instructor.
8. a) He is very well organized and delivers the material in a way that is easy to follow. b) Sometimes, he gets carried away with his stories, but he still has time to cover the material. c) no suggestions.
9. Great instructor. No need for improvement in my perspective.
10. he is very clear concerning his expectations for this course
11. Dr. Millette is an extremely competent instructor. He does a fine job of being stern with us the first semester in order to get us into the groove of medical school.
12. a) He is the best professor here at the COM. He could truly teach other professors how to educate. He can come across old and grumpy, but truly he cares about his students. He holds us to a high standard and more importantly
13. Teaches to that level that he expects us to know. He emphasizes what is necessary to know and does not make the material more difficult than it already is by providing arbitrary information. Also, the information he teaches is histology information and board information. He also helped me to find resources to aid with another class as well. One day he will retire and the COM will lose the best professor they have ever hired. Thank you Dr. Millette! I have thoroughly enjoyed having you as a professor.
14. Overall, a great instructor that seems to truly want the students to do well.
15. GREAT professor. Very knowledgeable and cares about students learning.
16. Dr. Millette is the best instructor, because he knows how to present complex material in a simple way at first. Then, he moves into the finer details. As a student, this is the ONLY way that I don't become overwhelmed with new information. He tells us analogies to help us relate information to other things, and it really shows that he cares about our understanding of the material, which makes me enjoy studying for this class quite a bit actually. I wish Dr. Millette taught every subject. He has great lab images available as an online resource, and his teaching

pace is very effective. His powerpoints are refined and edited, and they are not redundant. This is why I learn much better from his lectures and studying on my own later.

17. Dr. Millette has been an extremely effective professor. Having had a previous Histology course, Dr. Millette has made some of the concepts that I had previously merely memorized more clearly and brought about an understanding of the concepts. I appreciate the fact that he keeps material paced at an appropriate pace as well as the fact that he keeps histology relevant for our roles as future physicians. I like that he did not make us memorize information that was not relevant for our careers; such as memorizing the structure of hair shafts or teeth. Also, I like the fact the he does not require attendance in class. Dr. Millette is a valuable asset to the faculty and is one of my favorite professors at the COM.
18. Dr. Millette is awesome. He LOVES histology, and it makes me love histology.
19. Unavailable to provide feedback on course, as course is only halfway complete. It would be best to complete a course evaluation post course completion to better evaluate the course
unavailable to provide feedback on course, as course is only halfway complete. It would be best to complete a course evaluation post course completion to better evaluate the course. Also unsure as to why evaluation is timed, as these are completed in our "leisure" time.
20. Dr. Millette is straight forward and to the point. Good instructor.
21. Great Teacher
22. Excellent lecturer, I learn more from his lectures than I ever have listening to professors speak
23. His analogies are very effective.
24. Dr. Millette will sometimes get caught up on something that is not very important resulting in a consumption of valuable time. I think more time should be spent on the identification of organs and tissues. Dr. Millette is an effective professor. He is hands down the best professor here at WCUCOM. He always uses metaphors when teaching histology or any other course for that matter which helps one to understand and memorize the material.
25. Great professor. Needs to stay within time constraints, could also stay on subject during lecture.
26. I love Dr. Millette! My favorite teacher ever.
27. a) Has definitely improved from last semester by ending on time; this demonstrates that he really acknowledges our comments and concerns and is willing and able to accommodate our requests; we feel validated. -CLEARLY emphasizes testable material and not only tells us that it will definitely be on the test, but also explains how pertinent the material will be to pathophysiology which we will also see in clinicals -LOVE the practice exams and study guides presented - extremely grateful that he takes the extra time to finish lectures to post online b) N/A c) N/A
28. Dr. Millette is a great teacher, his course is well organized and his lectures are excellent. Do not change a thing.
29. Dr. Millette is by far one of our best professors if not the best. He is effective in teaching and gives us not only the information that is important for histology, but also for physiology as well. Histology, while only a one hour class, definitely ties biochemistry and physiology together in the Dr. Phib classes and Dr. Millette is vital for that happening.
30. a) Provided the students with good resources and practice review sessions.

31. a) Dr. Millette's lecture style is the most helpful of any professor we have. He really digs into the material and makes it accessible. b) He doesn't end class on time, ever. c) End classes about 5 minutes earlier than he normally does. Then we'd get our 10 minute break.
32. He is an excellent teacher.
33. An excellent instructor. Very enthusiastic towards the subject material. Exams reflect the material presented very well. Teaches beyond his spectrum of the specific course; provides material that is helpful with the integration of other courses such as physiology and biochemistry. No need for improvement or weaknesses present. I have learned a large amount of useful information from this class.
34. Great instructor!
35. He is one of the best teachers we have here. He communicates the material very well and makes us retain the information. I do wish the exams were 50% image and 50% written again though
36. Dr. Millette is a great professor. He explains things clearly in class, gives great examples to understand certain concepts, emphasizes the importance of the specific material he is covering that day, and I do like the overlap he gives to the other subjects. One improvement would be ending class on time but I understand the need to get a ton of material across to us in a short amount of time.
37. Dr. Millette is a great professor, he presents the information well and he gives good examples in class. He has realistic expectations and he makes them known. He presents the information in the most efficient way possible. I've enjoyed his class this year.
38. Dr. Millette is one of a few professors here who actually takes time to thoroughly go over each slide he has and TEACH it to us effectively. I really appreciate him for that. I really felt I learned a lot from his class because he took the time to actually teach the material to us and go in a thorough pace. Sometimes he would take too much time on some topics, but the things he said during class to supplement his slides and take notes over were crucial to my learning experience and he did a great job on it. I feel he truly cares about his students and wants to see us do well. He is like a father who yells at us when we need it but he truly cares. He gave us organ id lists, practice practical exam questions, supplemental powerpoints, and emphasized key points. So great job Dr. Millette.
39. A. Understands what we need to know for pathology to ensure we are able to ID organs. He listens to physiology lectures and attends physiology course to ensure he is truly "integrating the curriculum" and ensuring it is instinct with the curriculum. Overall, a VERY good professor. B. Doesn't always end on time, but I don't mind, I really enjoy his lectures. C. NONE (continue working to integrate the curriculum). It's really appreciated by the students that you do this. It surely goes above and beyond and really helping the school and the curriculum be better. He's doing much more than teaching histology, he's really working hard to make do with the curriculum and the changes that continue to happen with a growing school.
40. I enjoyed the course instructor's explanations and analogies were helpful for remembering key points.
41. Dr. Millette is by far one of the best first year instructors we have. He is very organized when giving his lectures and is very good at breaking the material down so that everyone can understand the basics and then building back up to the ultimate big picture. He is extremely

Evaluation – Histology II – Millette Comments

helpful in answering questions and overall seems to be extremely interested in knowing how much a student has learned instead of how well a student can recall minute details in his powerpoints. The only weakness I can see is that Dr. Millette does tend to run over his allotted amount of class time sometimes. Normally this is due to him trying to finish out a topic so that we are not confused when we go home to study or due to other classes running over into his class time so it is not a huge problem.

42. Dr. Millette is one of the best professors we have. He can teach many subjects other than histology and make it very clear. He could teach the integrated course all on his own and it would be great. Histology seemed to be reduced this year and it was disappointing.
43. The course was well taught. The book was amazing. Maybe my favorite text book in med school. Very well written. Good job on choosing text book and lecturing in opposition to the text. Thanks. I appreciate using rudimentary word pictures and anecdotes to illustrate some of the concepts. I wish the course was paced better. However, much better than last semester. I appreciated toning down the preaching at the beginning of the class and getting straight to the material. Much better this semester. I only wish there were more professors like you, I learned a lot. Thanks.
44. My respect for Dr. Millette has only grown. He is an incredible educator and we are lucky to have him. His presentation slide are very clear, he is always clear on important and pertinent information and paces most of the material well. His practice tests are amazing and really help with the learning process. Weaknesses, he likes the Game Cocks ...not cool. =)
45. Excellent
46. Dr. Millette is simply the best!!! I feel we are very blessed to have him as a professor at this institution. I would like to see other professors within the integrated curriculum sit in on his lectures to witness his teaching style as well as how he integrates the curriculum (just as Dr. Millette takes the time to listen in on physiology/biochem lectures). Also, we greatly appreciate his question stem writing, as they are very straight forward and pertinent to the topics of discussion.
47. a. He understands what is important in subjects for medical students b. He goes a little over during class c. Blocking his time at the beginning or end of the morning lecture times
48. I must admit, last semester, I tore Dr. Millette up in his eval because I thought he was a hateful man that didn't care about his students. While hard on the outside, Dr. Millette truly cares that we learn the material and prepare ourselves for Path, which I can appreciate. He doesn't force us to learn useless details that we will never again need to know, and he tests us on material that #1, he actually covers in class and #2, is relevant to us as future physicians not just a random tid bit he worked on once. Overall, Dr. Millette is a great professor. Do whatever you have to do to keep him around and happy.
49. Less scolding this semester was nice. I found that I paid more attention when not scolded and valued the material more. Needs to make lectures more concise in order to allow more time at end of class for questions. Ran over time for every lecture with the exception of one or two this semester.
50. Great professor
51. Very good teacher and his content help me in other courses.

Evaluation – Histology II – Millette Comments

52. I enjoyed the higher level of collaboration between Histology and Physiology this semester.
53. Hands down one of the best professors. I enjoy your organized and succinct powerpoints. When you lecture you tie the material together and it is very easy to follow. Try not to lecture everyone at the beginning of class because then we would have an extra 5 minutes of teaching.
54. a. very effective learner b. none c. put practice exams ahead of time/on timely manner
55. Dr. Millette is an effective instructor of histology. He makes the material easy to understand.
56. a) His experience teaching histology b) Not willing to incorporate more clinical examples c) One of the best professors. Follows book, clear powerpoints, great teaching
57. Dr. Millette really knows what he is talking about and he enjoys the material which makes it better for the students. The only thing is he is very vague about what we need to be able to identify for image exams and it seems like he wants to trick us a lot on exams. But overall he is a very enthusiastic teacher.
58. I like the simplicity and clarity of the PowerPoint lectures.
59. Dr. Millette is an outstanding teacher. His methods of teaching are very effective. His mnemonics and hints help us remember important concepts.
60. A. Presentation of material B. Finishing on time C. Finish on time
61. Dr. Millette is one of the finest professors of the COM. He explains physiology, biochemistry, and histology with great detail.
62. Dr. Millett is an awesome teacher. He not only teaches you histology but also how to read slides. No improvement needed here
63. The course is very informative and in depth covering of the field of histology. Although at first I was not a fan Dr. Millette's demeanor, as the year went along, I was able to appreciate his efforts and his background. I am very appreciative to be taught by this faculty member.
64. Best professor of first year! His powerpoints are extremely clear and concise. His presentation skills reinforce the material across to the students. His support for non-attendance should be considered by all other professors. I hope you don't retire anytime soon Dr. Millette!
65. I liked when you covered a subject after it was introduced in physio, because you clarified a lot of information that the physiology department did not.
66. He is one of the best instructors I know. Despite my bad grade in the class it did not affect his way of treating me with respect, sitting down and talking with me about my weaknesses. Thank you Dr. Millette!
67. There are no points which need improvement
68. Dr. Millette is a very knowledgeable instructor. He is to the point and is over all very effective. I hope that he is better about ending class on time.
69. Dr. Millette needs to explain to the rest of the staff and "powers that be" that we don't need mandatory attendance!!!! He does a great job, that's why I go to his class, NOT because I'm scared I won't get to click in for my attendance and write a 1000 page paper!
70. Awesome professor! Very knowledgeable and has very fair exams that are straightforward. I wish Dr. Millette taught every course!
71. A) Dr. Millette is very knowledgeable and creates very clear powerpoints. They are easy to follow and easy to study from. He does a good job of emphasizing key topics and providing students with study aids/mnemonics to remember the important information. He tries to make

sure that students have a good grasp not only on his material, but on the material presented in Biochemistry and Physiology. He also tries to help us learn good study techniques. B) Occasionally, Dr. Millette runs over his allotted 50 minute lecture hour. He also has knack for going on a short scolding session when he thinks we are not studying enough or is disappointed with our performance. C) Be mindful of the time as you lecture. Try to stick within your allotted 50 minutes. Also, try not to scold us too much.

72. Dr. Millette is such a wonderful professor! One of the best at the COM! He tells great stories, shows videos, and uses lots of mnemonics to remember key facts. He puts a lot of emphasis on what we need to know. He makes histology fun! He is a very busy man though, and does not have time for meeting with students outside of class. He is on a lot of committees so it is understandable. WHY doesn't this man teach biochemistry?! His PhD is biochemistry... He is very entertaining and knowledgeable. If I could change one thing, it would be to begin and end class on time. He goes over the 50-minute mark constantly... sometimes because the professor before him ended late as well. This is something that all the professors can work on.
73. Dr. Millette is great! I have a hard time paying attention and the lectures are anything but succinct, but they are effective. That's what counts!
74. a) Great lecturer. Dr. Millette is a very effective professor in terms of being able to present the material in a way that is clear and easy to understand. I very much enjoy his analogies. b) Sometimes he can be difficult to get in contact with. Especially with questions before an exam. c) Better accessibility to students.
75. a. Dr. Millette is a great instructor. He clearly tells us what is important. He teaches us the material. He tests us on what he teaches us. He then relates to us the material that we have learned that we will see in pathology next semester. b. Dr. Millette has a problem. Surely he knows about this? He consistently runs over in time. He is passionate about his subject matter and he is not so passionate about the two hands on the clock. It is not a big problem, as we all enjoy learning...however, it throws off the following professor...which then throws off the next one (it's a chain reaction that finds its way into us having less time for lunch). c. Actually, I have no suggestions for improvement for Dr. Millette as he is superb in what he teaches, except for him running over his time in lecture. He either needs to get more lecture hours or try his best to fit it all in 50 minute lecture windows. When one professor runs over in time, as students our whole day is affected.
76. Well organized class. The lab powerpoints and Mr. SID were helpful for studying for the image exam.
77. Dr. Millette is a fantastic professor. Very knowledgeable about the material that he teaches, as well as most other subjects (except gross anatomy!). He teaches student what they need to know, which directly follows the book. This is the only course that I can actually use the book to learn. Nothing but good things to say about the professor.
78. Dr. Millette is a good professor
